ASEAN – German Technical Cooperation Transport and Climate Change

Implemented by

Energy Efficiency and Climate Change Mitigation in the Land Transport Sector – Transport and Climate Change

Project objective:

Develop, implement and monitor strategies and action plans towards the improvement of energy efficiency and GHG emissions

Partner countries:

Thailand, Philippines, Vietnam, Indonesia, Malaysia

ASEAN Bodies:

Relevant working groups such as Land Transport and Climate Change

Focus areas:

ASEAN – German Technical Cooperation Transport and Climate Change

Implemented by

TCC's works on MRV for transport sector

Motivation and approaches:

- Global dialogue on climate change commits each country to plan mitigation actions for reducing GHG emissions. Thailand also pledged a NAMA road map, and INDCs in the UNFCCC conference to show the country's contributions.
- As specified in the ASEAN Transport Strategic Plan (2016-2025), sustainable transport is included as key goal to promote low carbon modes of transport.
- In Thailand, there are many master plans that need a good monitoring system to measure the GHG emissions and effectiveness of the sustainable transport policy for transport sector, such as Thailand Climate Change Master Plan, Environmental Sustainable Transport Master Plan, and Energy Efficiency Plan.

Activities

- Report “Monitoring transport GHG emissions in Thailand” to explore the current situation of the available transport data, data gaps, and recommendation for the improvement.
- Capacity building for governmental officers by organising workshops and training courses.

Experts' Discussion on Essential Transport Indicators for the Improvement of MRV in Thailand (December 9, 2014)

ASEAN – German Technical Cooperation Transport and Climate Change

Implemented by

Key activities in Thailand

NAMA selection

- Topic to be developed as NAMA proposal

MRV system

- Improvement of transport data collection and reliability

Policy assessment

- Analyses and recommend the current transport and climate change policy

Thailand Stocktaking Report

- Collect & disseminate all important transport data and policies

Workshop & Seminar

- Workshop, expert discussion e.g. fuel economy, MRV, transport policies

ASEAN – German Technical Cooperation Transport and Climate Change

Implemented by
